## Solutions

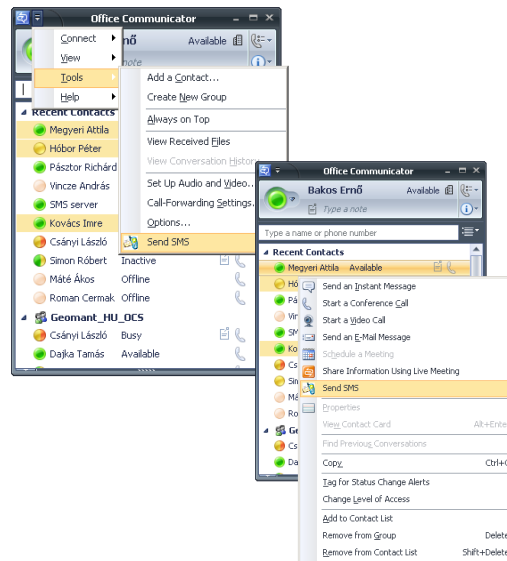

Rapid, customised deployment of Unified Communications solutions using Geomant's unique mix of products, services, integration tools and methodology.

## Services

Expert Unified Communications consulting, design, deployment integration, customisation and support services.

# Geomant Software Solutions SMS for Microsoft Communicator

Sends SMS Text Messages from Corporate Instant Messaging Systems.

Geomant's SMS for Microsoft Communicator enables SMS Text message to be sent directly from Microsoft Communicator.

- Send an SMS text message from the Office Communicator Tool menu or by right clicking on the user: Send SMS text messages to one or more contacts from the Office Communicator contact list.
- Send an SMS text message from the conversation window: maybe the other party is no longer on-line, or you wish to confirm some information – now you can easily send an SMS as part of the conversation.

## Components

- **Server application:** The server application interfaces with OCS 2007 and initiates outbound SMS text messages.
- **Client application:** The client application allows SMS text messages to be initiated from the contact list or during a conversation.
- **Geomant SMS Services:** Geomant's SMS service provides an on-line 'pay as you go' service for delivering outbound SMS text messages anywhere in the world. There is no requirement to invest in a separate SMS gateway or integrate OCS with such a gateway. Messages can be delivered so they appear to come from the initiator's mobile phone, allowing replies to be sent direct to that mobile phone.

## Benefits

- **Powerful:** Makes Office Communicator an even more powerful IM client – reaches out to contacts who are not currently on-line.
- **Cost-effective:** Often cheaper than sending SMS from a mobile phone.
- **Integrated:** fully integrated with Office Communicator, and hence Active Directory and personal contact lists.

## Availability

Geomant SMS for Office Communicator is available through resellers or direct from Geomant:
